Visit to the Rettenmaier Company

Messrs. Rettenmaier sen. + jun. Mr. Schlosser

05/07/97

Dr. Recknagel

EXHIBIT N

The distribution of non-treated wood fibre materials is limited because these admittedly would be suited with regard to the filtration properties, but do emit ingredients.

Liquid glass, sugar (glucose, dextrose, fructose, molasses), dye solutions, fat An application is opened up for the wood fibres that does not imply the expenditure involved in cellulose preparation.

Particles may also be cotton, straw, hemp, flax, bark, grasses
Cellulose-containing re-usable waste materials, e.g. used paper, paper
waste

Not all of the sensory active ingredients

A.18 Particle dimensions over screen

A. 31' The grain shape changes during wet-phase grinding and, thus, influences the water equivalent
